

TECHNICAL SKILLS

Languages & Frameworks: Java, Python, TypeScript, JavaScript, SQL, Dropwizard, FastAPI, React
Data & Infrastructure: MySQL, Vitess, Memcached, Kafka, AWS (Amazon SQS, S3, DynamoDB, API Gateway, Fargate), Docker
Tools & Testing: Git, Jenkins, Maven, Grafana, GraphQL, OpenTelemetry
AI Engineering: Tool-Calling Agents, Multimodal Agents, Prompt Engineering, LLM Evaluation, Regression Testing

EXPERIENCE

- HubSpot** | *Senior Software Engineer I, Calling Product* August 2026 – Present
- Designed a Java/Kafka/SQS pipeline that saved **\$50K+ monthly** by resolving phone-number overages across 7,500 customers and 30,000 unpaid phone numbers through automated notifications, grace periods, and decommissioning.
 - Built an issue-reporting platform **used across HubSpot**, delivering reports to owning teams through Slack; implemented UI element selection in React/TypeScript and ownership discovery through a custom Sourcegraph GraphQL client.
 - Engineered an **asynchronous, multimodal AI agent** atop the issue-reporting platform to resolve ownership cases that programmatic search misrouted; combined screenshots with code-search tools and built regression evaluations and Slack feedback tracking.
- HubSpot** | *Software Engineer, Calling Product* August 2025 – August 2026
- Optimized the call-initiation path with Memcached caching and concurrent API requests, cutting settings retrieval time by **50%** while validating existing behavior to prevent regressions.
 - Unified fragmented recording settings in an extensible Java API serving 15+ consumers and 2M requests/day; enabled new country-level controls in **one week vs. a two-month estimate**, with changes in 2 repositories rather than 20.
 - Championed pause-recording controls for sales and service representatives; designed APIs integrating the Twilio SDK and delivered the React interface to support compliance workflows across a calling platform handling **1M calls/day**.
 - Orchestrated MySQL migrations to establish a source of truth for phone-number metadata across the calling platform; eliminated orphaned records, retired legacy read/write paths, and **reduced table size by 10%**.
- HubSpot** | *Software Engineer Intern, Sandboxes and Portability* June 2024 – August 2024
- Architected REST APIs for **10,000+ sandbox users** to manage and sync custom CRM objects across test and production; used Kafka and Amazon SQS for asynchronous processing and inter-object dependency handling.
- Capital One** | *Software Engineer Intern, Cyber SRE* June 2023 – August 2023
- Automated engineering-standards reviews across **500+ repositories in Capital One's Cyber Organization**, giving developers on-demand findings through Slack; built the Python service on AWS Fargate with Route 53 and ALB.

PROJECTS

- PrivacyCheck** | *React, Python, FastAPI, AWS, GPT-4o / GPT-4o mini* Project Overview
- Extended PrivacyCheck's website privacy-policy analysis with **local application privacy assessments**; linked its React extension to a Windows Python/FastAPI app via custom URL protocols and localhost APIs, with PyInstaller packaging and S3 downloads.
 - Enabled users to personalize website privacy scores by weighting **20 User Control and GDPR metrics**; built preference controls, consent flows, local persistence, and DynamoDB-backed storage.
 - Led **LLM evaluation** for privacy-policy scoring, benchmarking GPT-4o and GPT-4o mini against human-scored policies to guide model selection and prompt refinement.

LEADERSHIP EXPERIENCE

- Texas Raas Dance Team** | *Captain* August 2024 – May 2025
- Managed a **\$15,000 budget** and led music, choreography, and production for a national champion Raas-Garba team.
- Teach For America** | *IGNITE Fellow* January 2023 – May 2023
- Tutored three sixth-graders in rural Oklahoma for 8 hours weekly, helping them reach grade-level math standards.

EDUCATION

- The University of Texas at Austin** August 2021 – May 2025
B.S. in Electrical and Computer Engineering
Coursework: Parallel Algorithms (Grad), Unconventional Computation (Grad), Operating Systems, Software Engineering, Data Science, Computer Vision

ADDITIONAL INFORMATION

- Honors:** Raas All-Stars National Championship (2022–2024); HackTX 2023 — 1st Place & Best Use of Streamlit
Personal Interests: Running, Playing Sports, Dance, Texas Football, Board Games, RPG Video Games, Classical Music
