TECHNICAL SKILLS

Languages & Frameworks: Java, Python, TypeScript, JavaScript, SQL, FastAPI, React

Data & Infrastructure: MySQL, Vitess, Memcached, Kafka, AWS (SQS, S3, DynamoDB, API Gateway, Fargate), Docker, Kubernetes

Tools & Testing: Git, Jenkins, Maven, Grafana, Postman, OpenTelemetry

AI Engineering: Agent Tool Integration, Multimodal Agents, LLM Evaluation, Regression Evaluation Suites

EXPERIENCE

HubSpot | Senior Software Engineer I, Calling Product

August 2026 – Present

- Designed a Java/Kafka/SQS overage-enforcement pipeline that saved **\$50K+ monthly**, bringing 7,500 customers and 30,000 unpaid phone numbers into compliance through automated notifications, grace periods, and decommissioning.
- Built an issue-reporting platform **used across HubSpot**, delivering reports to owning teams through Slack; Implemented UI element selection in React/TypeScript and ownership discovery through a custom Sourcegraph GraphQL client.
- Engineered an **asynchronous, multimodal AI agent** atop the reporting platform to resolve ownership with code-search tools; built regression evaluations from misrouted reports and instrumented Slack feedback to track agent-routing errors.

HubSpot | Software Engineer, Calling Product

August 2025 – August 2026

- Optimized the call-initiation path with Memcached caching and parallelizing API requests, cutting settings retrieval time **50%** while validating existing behavior to prevent regressions.
- Consolidated fragmented recording settings into a single, extensible REST API serving 15+ consumers and 2M requests/day; delivered phone-number and user-level controls and enabled a teammate to add country-level controls in one week versus an estimated two months.
- Championed pause-recording controls for sales and service representatives; designed APIs integrating the Twilio SDK and delivered the React interface to support compliance workflows across a calling platform handling **1M calls/day**.
- Orchestrated MySQL migrations and cleanup jobs to establish a source of truth for phone-number metadata across the calling platform; eliminated orphaned records, retired legacy read/write paths, and **reduced table size by 20%**.

HubSpot | Software Engineer Intern, Sandboxes and Portability

June 2024 – August 2024

- Built Java/Dropwizard APIs for **10,000+ sandbox users** to manage and sync custom CRM objects across test and production; used Kafka and Amazon SQS for asynchronous processing and inter-object dependency handling.

Capital One | Software Engineer Intern, Cyber SRE

June 2023 – August 2023

- Automated engineering-standards reviews across **500+ repositories in Capital One's Cyber line of business**, giving developers on-demand findings through Slack; built the Python service on AWS Fargate with Route 53 and ALB.

PROJECTS

PrivacyCheck, UT Center for Identity | React, Python, FastAPI, AWS, GPT-4o / GPT-4o mini

Poster

- Delivered a Windows app that scores privacy risks across locally installed applications; connected a React extension to its Python/FastAPI backend through **custom URL protocols and localhost APIs**, with PyInstaller packaging and S3 downloads.
- Built a preference-setting workflow letting users weight **20 privacy metrics** by personal importance to tailor website privacy scores; implemented consent, saved preferences, and REST API submissions to a DynamoDB-backed service.
- Led **LLM evaluation** for privacy-policy scoring, benchmarking GPT-4o and GPT-4o mini against human-scored policies across User Control and GDPR metrics to guide model selection and prompt refinement.

LEADERSHIP EXPERIENCE

Texas Raas Dance Team | Captain

August 2024 – May 2025

- Managed a **\$15,000 budget** and led music, choreography, and production for a national champion Raas-Garba team.

Teach For America | IGNITE Fellow

January 2023 – May 2023

- Led instruction for three sixth-graders in rural Oklahoma for 8 hours weekly, helping them reach grade-level math standards.

EDUCATION

The University of Texas at Austin

August 2021 – May 2025

B.S. in Electrical and Computer Engineering

Selected Coursework: Parallel Algorithms (Grad), Unconventional Computation (Grad), Operating Systems, Software Engineering, Data Science and Machine Learning, Computer Vision

ADDITIONAL INFORMATION

Honors: Raas All-Stars National Championship (2022–2024), HackTX 2023 — 1st Place & Best Use of Streamlit

Personal Interests: Running, Playing Sports, Dance, Texas Football, Board Games, RPG Video Games
